## 4 Nectar's Treasury Jackpot Feature

### 4.1 Overview

Nectar's Treasury Jackpot is progressive jackpot functioning as standalone or network-based system. Nectar's Treasury Jackpot have 4 mystery progressive levels – Ground, Garden, Forest and Mountains.

Levels growth depends on the contributions from slot machines participating in the system.

Jackpot draw is performed on the winning machine and is presented in the form of the bonus game Nectar's Treasury.

Figure 2: Current progressive jackpot values

### 4.2 Bonus Game

Nectar's Treasury bonus game is randomly triggered after any main spin in reel games. The player is informed about winning the bonus game by a congratulatory window. All winnings are added to player's credit meter and can be gambled further.

After entering the bonus game, the player is awarded with Ground jackpot level and 1 to 3 lives. Higher total bet increases the number of lives and the chances of winning higher jackpot levels.

The game starts with congratulations on winning Ground level and then it is time for the player to try his luck on the remaining jackpot levels – Garden, Forest and Mountains.

To complete a level the player needs to guess, in the allotted time, which of the 5 buds conceals a flower. This can be accomplished by making choice either using Hold 1...Hold 5

buttons on the keyboard or by touching a bud on the touchscreen. If successful (a flower appears), the player needs to collect two more flowers to fill three flasks with honey.

If unsuccessful, the player loses 1 life (green leaves below). If the player has still the green leaves (lives) left, the game continues.

Having collected three honey, the player wins a jackpot level. At the same time the previous level completed becomes unavailable, because the player moves one level up.

The other levels are completed the same way.

The bonus game continues until the player collects three flasks with honey on the last jackpot level (Mountains) or until all lives are lost.

For each selection the player is given minimum 3 seconds before an automatic random selection of the same duration is initiated. During the automatic selection the player still can make choice. When the automatic selection time is over, the program will offer its choice.
